Test Method / Test Requirement

CAN IOPT Test for devices

- with CAN FD up to 5 Mbit/s
- with low power

- 1 Interoperability test specification for high-speed CAN transceiver or equivalent devices
IOPT.CAN v02
- 2 Static Tests based on:
ISO 16845-2:2018, Road vehicles – Controller area network (CAN) conformance test plan – Part 2: High-speed medium access unit – Conformance test plan

Performed Tests and References

The Test Results refer to the delivered device.

1 Homogeneous Network with 16 Nodes / 8 Nodes

PassHeterogeneous Network with 16 Nodes – Mix of 6
8 Nodes – Mix of 5**Pass**

2 Test type 1, static test cases

Pass

5 Test List

5.1 Static Conformance Tests (ISO 16845-2:2018)

Used data sheet:

CA-IF1044-Q1_datasheet_Version1.02_en_20221124

"The motivation of static test cases is to check the availability and the boundaries in the data sheet of the IUT. For all integrated circuits every related parameter in Table 4 shall be part of the data sheet and fulfil the specified boundaries in terms of physical worst-case condition. Data sheet parameter names may deviate from the names in Table 4, but in this case a cross-reference list (data sheet versus Table 4) shall be provided for this test. Parameter conditions may deviate from the conditions in Table 4, if the data sheet conditions are according to the physical worst-case context in Table 4."

HS-PMA types:

- a - without low-power mode and partial network, **n/a**
- b - with low-power mode, normal biasing and without partial network,**
- c - with low-power mode, automatic biasing and without partial network, **n/a**
- d - with low-power mode, automatic biasing and partial network; **n/a**
